

Yuichiro Yano, MD, PhD, is Associate Professor in the Yokohama City University and Adjunct Associate Professor in the Duke University School of Medicine, and a Visiting Professor in the Yonsei University College of Medicine. As a physician scientist, he has been conducting prospective observational and interventional studies using clinic, home, and 24-hour ambulatory blood pressure monitoring in Japan and the U.S. He also has been conducting research on the etiology and outcomes of abnormal blood pressure phenotypes, longitudinal modeling of cardiovascular risks, and cardiovascular disease risk prediction among young adults. He has authored or co-authored more than 100 publications in peer reviewed journals in the field, including Journal of the American Medical Association (JAMA) and New England Journal of Medicine (NEJM). In 2016 he received the American Society of Hypertension's Young Scholar Award and the Sandra A. Daugherty Award from the American Heart Association. In 2017 he received the Hypertension Top Paper Award. He was recently recognized by the American Heart Association for authoring one of the most impactful publications of 2018, and received Japanese Society of Hypertension Academic Award 2019.
